

REDUCING THE RISK OF OPIOID POISONING

Avoid mixing drugs.

Alcohol & benzos enhance opioid effects; cocaine & methamphetamines mask them. Opioids may already be cut with fentanyl, a synthetic opioid known to greatly increase risk of overdose.

Know the Risks.

Be cautious of your individual tolerance, especially after a period of not using or when injecting with a needle. These factors increase overdose risk.

Plan ahead.

Have a plan to respond to an emergency.
