

Producing a Camtasia Video

The following steps will guide you through the process of producing a video created using Camtasia Studio. A Camtasia project is stored as a .camproj file, which only can be opened with Camtasia Studio. To create a video that others can view, you must produce the video in a different format. We recommend .mp4 format.

1. In the Camtasia Studio window, click **Produce and share** in the top left

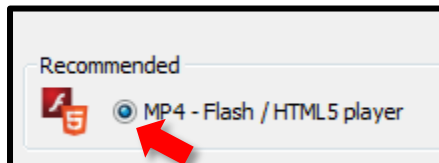

2. Choose **Custom production settings** from the drop down menu.

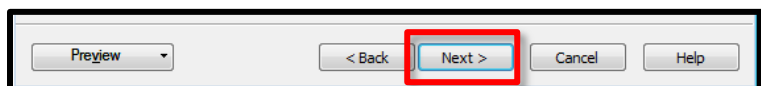

3. Click **Next >**

4. Select the first option (Recommended) **MP4 – Flash/ HTML 5 player**
Click **Next >**

5. It is not necessary to change anything for the Flash/ HTML5 Player Options.
Click **Next >**

6. It is not necessary to change anything for the Video Options.
Click **Next >**

Producing a Camtasia Video

7. On the Produce Video screen, **name your video** by editing the Production Name field.

8. Choose the **folder** where your video will be saved. The default folder is in the Camtasia Studio folder in Documents.

9. Click **Finish**

10. Your video will begin **rendering**. Rendering may take a few minutes depending on the length of the video.

11. When production is complete, the Production Results window will display. Click **Finish**.

12. **Access your completed video** by opening the folder specified earlier (normally the Camtasia Studio folder in Documents). Open the production folder and double click the **.mp4 file** to view your video.
