Dr. Kristofer Ray co-edited a volume published by the University of Wisconsin Press.

*Understanding and Teaching Native American History* offers an urgently needed remedy to a long-standing gap in American history education. Despite the availability of new scholarship, many teachers struggle with contextualizing Indigenous experiences. As a result, Native peoples overwhelmingly find themselves relegated to foils of the European settlers whose lives provide "the dominant" pedagogical narrative. This volume offers an alternative, highlighting the integral roles (both historic and ongoing) of Native peoples via interdisciplinary coverage of a wide array of topics. It provides richly researched content and resources across the chronological and geographical landscape of the continent.
